Phoenix, AZ / Salem, OR

Summary

Software developer with 5+ years of experience building scalable server infrastructure and full-stack applications. Co-founded PitSim, a Minecraft network that generated \$30,000 in revenue while serving thousands of players. Proven ability to architect distributed systems, deploy Kubernetes clusters, and lead technical projects from concept to production. Currently pursuing B.Sc. in Computer Science at Willamette University.

Technical Skills

- **Languages:** Java, JavaScript/TypeScript, C++, Python, Go, C, PHP, Rust
- **Web Technologies:** Laravel, Livewire, WebSockets, HTML/CSS, REST APIs, React
- **Frameworks & Platforms:** Spigot, BungeeCord, NMS (Minecraft Protocol), Node.js
- **Databases & Caching:** MySQL, Google Firestore, Redis, MongoDB
- **DevOps & Infrastructure:** Docker, Kubernetes, Helm Charts, Git, CI/CD
- **Build Tools:** Gradle, Maven, npm

Experience

Co-Founder & Lead Developer — PitSim Minecraft Network

May 2021 – Aug 2023

- Architected and deployed a large-scale Minecraft network serving thousands of players with 99.9% uptime
- Developed custom gameplay systems using Spigot, BungeeCord, and NMS (Minecraft protocol manipulation)
- Engineered backend infrastructure with MySQL and Google Firestore for player data persistence and real-time syncing
- Implemented monetization strategy generating \$30,000 in revenue through Tebex store integration
- Led volunteer staff team and collaborated on game design with focus on player retention and engagement
- Managed full DevOps lifecycle including server provisioning, monitoring, and incident response

Freelance Development — Devroom

May 2025 – Present

- Worked with various clients through Devroom on different types of software ranging from Web Development to AI/ML integration
- Maintained professional relations with clients, helping them understand the technical limitations and ramifications of their requests
- Provided professional-grade consulting to assist clients with assessing their software-based needs as a business

Club President — Computing Club at Willamette University

May 2026 – Present

- Worked with other members of club leadership to design and execute student lectures, club events, and group projects

Personal Projects

Distributed Minecraft Network Platform

Kubernetes, Helm, Go, Redis

2024 – Present

- Designed Kubernetes-based deployment system for managing large-scale Minecraft server networks
- Implemented auto-scaling infrastructure that dynamically provisions game servers based on player demand
- Built modular gamemode deployment system allowing hot-swapping of game types without downtime
- Developed web control panel for real-time monitoring and management of distributed server clusters
- Utilized Redis for cross-server communication and state synchronization

Dorm room "E-Waste" Homelab

Kubernetes, Helm, Go, Redis

2025 – Present

- Salvaged and configured 10 different machines from my school's IT department
- Linked all the machines together into a Kubernetes cluster to run synchronized workloads
- Employed advanced networking techniques to grant the cluster proper internet ingress and egress
- Actively using this cluster to support my large amount of Kubernetes related development
- Designed robust Helm charts and systems for proper monitoring and remote control over the cluster

Quantum Computing Language Interpreter — QuantumVM

Rust, OpenQASM

2026 - Present

- Developed a interpreter runtime for the quantum computing programming language OpenQASM, complete with type checking and syntax highlighting via LSP (Language Server Protocol)
- Created plugins for popular code editors VS Code and JetBrains IDEA, implementing the runtime and Language Server capabilities

Discord-Canvas Integration Bot

C++, Discord API, Canvas LMS API

2023

- Created Discord bot integrating with Instructure's Canvas LMS to automate student hub management
- Implemented real-time assignment notifications and grade tracking for student communities
- Designed REST API wrapper for Canvas integration with error handling and rate limiting

Real-Time Chat Application

Laravel, Livewire, WebSockets

2023

- Built Discord-style web application with real-time messaging using Laravel and Livewire
- Implemented WebSocket connections for instant message delivery and presence indicators
- Demonstrated full-stack development skills across backend logic, database design, and frontend UI

Education

B.Sc. Computer Science

Willamette University, Salem, OR

Aug 2024 – Present

High School Diploma

Arizona School for the Arts, Phoenix, AZ

Graduated with Arizona State Seal of Arts Proficiency

Aug 2020 – May 2024
